Quiz 4
Wednesday, 2/07

Name: _Jordan Judt_   Student ID: _7208404_

20 points per question.

1.   What is "Requirements Engineering"?

Process of finding out, analyzing, documenting, and checking these services + constraints

2.   What is the distinction between functional and non-functional requirements?

Functional requirements describe interactions between the system and its environment

Nonfunctional requirements are aspects not directly related to functional behavior

3.   What are user requirements and system requirements?

User requirements are statements and diagrams written for the customer
System Requirements are more detailed descriptions of system's functions, services, and operational constraints.

4.   What are three non-functional classifications?

Product requirements, organizational requirements, external requirements

5.   What is a use-case?

List of actions/events defining interactions between an actor and a system.
